The frequency accuracy for AC ranges is 0.01% and is crystal controlled. The setting resolution is 1 Hz.

The output resistance on the 20 mV and 200mV ranges is $10\ \Omega$ or $50\ \Omega$. This must be taken into account when loads of $100\ \text{k}\Omega$ or less are being driven.

A $100\ \text{k}\Omega$ load will result in a 0.01% error. All AC outputs exclude the DC component.
