

Description

The 7080-HD-MFS is the heavy duty work bench with a multifunction shelf featuring lighting and power sockets. The unit incorporates a framework bench with robust steel endframes and cross braces to provide maximum reinforcement. The worktop is 2000 mm wide x 800 mm deep with 40 mm thick durable laminate finish with shock proof edging (other tops available upon request). The frame consists of two top cross members with rear angled corner braces and single base cross member that is situated across the lower rear section of the bench. All standard under worktop fittings are available, these include drawer and cabinet units, and PC/dry block calibrator holders. Additional fittings are also available. The shelf is fitted to arms connected at the rear of the endframe legs, with a heavy duty perforated panel situated inbetween, used for mounting tools, shelves, storage bins etc.

The bench is premium grade and extremely robust for various applications across industries. The shelf is specifically designed to accommodate heavy and deep instruments. The under shelf section provides suitable lighting for work performed on the bench, with sockets for on-hand power as needed. The under shelf section can also be customised to incorporate communication ports. The purpose of comms (RS-232, USB etc), is to enable instruments to be located on top of the shelf with rear connecting ports that can be passed from the instrument to the back of the shelf, then out to the under section of the shelf. This makes connections to computers and laptops easy and quick on the benchtop.

Ordering Information

7080-HD-MFS..... Heavy Duty CalBench with Multifunction Shelf

Features
