

Description

The 7081 and 7081-XD are optional expansions for the CalBench system. They provide additional housing for modules, situated below the primary console. 7081 consoles are available for the 7080-HD (2000 mm wide) and 7080-HD15 (1500 mm wide) CalBenches.

The standard 7081 is 225 mm deep and can be fitted with a select range of modules. The 7081-XD is 300 mm deep and can house all modules.

They can also be ordered as stand alone consoles that can be fitted to existing worktops and benches. These are commonly utilised for service and utility benches, and vehicle fitted systems.
