

## Description

The 7130 is an ergonomic ESD foot support that positions under the CalBench work station. It provides users with additional comfort when operating modules and working at the bench.

The unit features an angle adjustment of the padded platform. This allows individual users to utilise the foot rest in their preferred working position.

The standard 7130 is the freestanding version is best utilised with the 7080-HD heavy duty framework CalBench.

The 7130-RM is a suspended version that can be used with the cantilever type CalBenches (7080).

Both units can be used under standard work benches also.
