

Description

A tool kit that is supplied as standard with CalBench orders. It contains tools and extras that can be used for the system installation, and then general use after that.

It includes a multi-pocket tool bag to keep the tools in, and a double sided compartment box for parts storage. The kit helps maintain organisation on the CalBench and provides users with a selection of tools for various service applications.

The kit includes a screwdriver set, pliers, adjustable spanners, stubby spanners, hex keys and trimming kit. These tools are useful for process and pressure CalBench systems when users are working on instrumentation such as transmitters. They provide a solution for working with pressure fittings and adaptors for fastening and removal.

The tools can also be removed from the kit and stored on the perforated panel of the CalBench. This makes them readily accessible and visible for usage when required. Tool hooks and holders are sold separately.
